

RADITEK INC.

High Power Couplers

RADITEK specializes in Design, Development, and Manufacturing of "High Volume/Low Cost" Wireless and Microwave Isolators and Circulators. Our High Power Couplers are ideal if low cost, small size and lightweight are all key considerations in your current design requirements. Teflon fiberglass Stripline circuits are enclosed within a machined housing that eliminates RF moding and provides high RF shielding. Our components are also characterized by low EMI, low insertion loss, and low VSWR. Improved performance specs are achieved by using embedded resistors - leading to hermetically sealed packages. Specifically, the RCP-806-869M-30d-N22-250W is a 30 dB coupler designed for an array of applications, such as monitoring high power amplifiers. This device can also be adjusted to additional frequencies. This unit is designed for 250 Watt continuous power without heat sinking but can handle more with a heat sink.
