Key Features

- L-band range of 950 - 2050 MHz
- Single/Dual direct-connect polarization inputs
- Wide input signal dynamic range (70 dBm nominal)
- Outstanding sensitivity
  - (minimum C/No is better than 35 dB-Hz)
- Fully synthesized tuning with 1 kHz tuning steps
- User-selectable tracking slope
- Spectral Display

Additional Features

- Contextual menus, spin knob and keypad aid user interaction
- Monopulse capability
- Excellent tracking signal linearity
- Absolute input power level display
- Serial and parallel remote control capability (contact closure; RS-232, RS-422)
- Front Panel 70 MHz monitor port (50 Ω BNC female)

Product Description

Our Digital Tracking Receiver (DTR) is a fully synthesized tracking receiver developed for satellite tracking and uplink power control applications. This DSP-based receiver accepts wideband RF inputs, performs frequency selection, and digitally processes the selected signal.

The DTR can be configured for numerous input frequency ranges from L-band to Ka-band. Multi-band applications are also readily accommodated. DDS techniques facilitate 1 kHz frequency resolution for any input frequency range.

The use of DSP technology, rather than conventional analog radio techniques, provides outstanding linearity and operational flexibility. Software controlled signal detection can accommodate virtually any modulation scheme.

A powerful and intuitive user interface provides the ability to custom configure specific applications in a very straightforward manner. The user settings provide easy configuration of tracking signal slope to match a wide range of next-level system components. A “Spectral Display” function allows the user to view real time amplitude vs. frequency data.

The flexibility and unparalleled attributes, resulting from state-of-the art concepts and components, places the DTR at the forefront of receiver technology.
## Digital Tracking Receiver

*Frequency band may require multiple downconverters to achieve full spectrum listed.*

### RF Specifications

- **Tuning Resolution:** 1 kHz
- **Frequency Stability (0-50°C):** ± 5 PPM
- **RF Signal Input Impedance:** 50 Ω
- **Input Total Power Level:** -10 dBm max
- **Input Signal Level Range:** -40 to -110 dBm (nominal)
- **Minimum Signal Level Input C/No:** 35 dB-Hz
- **Detection Type:** FFT-Based, Non-Coherent Integration
- **Serial Data Interface:** RS-232, RS-422
- **Serial Data Rates:** 1200, 9600, 19.2k, 38.4k, 56k bps
- **Analog Tracking Voltage Outputs:** -10 to +10 VDC (Configurable) 14-bit Resolution
- **Tracking Voltage Sensitivity (Tracking Slope):** User Adjustable (-1V/dB - +1V/dB)
- **Tracking Voltage Linearity (over a 50 dB input range):** ± 0.5 dB
- **70 MHz IF Monitor Port Impedance:** 50 Ω

### Optional Features

- Additional buffered DC Tracking Signal Output
- Dual Channel Configuration for Monopulse Tracking
- Communication Carrier Tracking Capability
- Additional RF Inputs for Dual Pol Multi-Band Applications

### Ordering Information

- **L-band Max Power Consumption:** 45W
- **Specify:**
  - Input frequency range(s)
  - Single or Dual Pol Input
  - Line Voltage
  - One or two buffered DC outputs
  - Optional Features
  - System Specifics

---

The Spectral Display offers a convenient amplitude vs. frequency display of the received signal. The display is useful for system fault isolation, for routine maintenance and is also cost effective when a full function spectrum analyzer is not available or necessary.
